* Most of the listed are classrooms but there also a few other types of rooms such as studios, labs, or presentation/event spaces.

DEFINITIONS:

Video via Monitor - video playback is displayed on a monitor screen

Video/Data via Monitor - video and computer output are displayed on a monitor screen

Video/Data via Projector – video/computer output are projected onto a wall screen. **m = multi-standard:** VCR handles US (NTSC) and many of the international signal formats (PAL, SECAM, etc.)

Slide Projection - 2"x2" carousel slide projector or comparable alternative equipment for slide projection

Overhead Projection - 3M overhead projector for display of transparencies

Document camera - high-resolution video presenter that can project all types of media (e.g. book, object) through a monitor or data projector

CD - Compact Disc player

Laserdisc - Laserdisc player

DVD - DVD player / **m = multi-regional** : DVD handles US (region 1) discs and many of the other world regions and PAL format

Cassette - audiocassette player

Screen - wall or tripod screen(s); p indicates portable tripod screen

In-room Sound - amplification of sound through wall- or ceiling-mounted speakers

PC - in-room computer with floppy disk, CD or DVD-ROM, USB port, and network connection, some with additional zip drive

Network Jack - network jack is available for a computer brought to the room (user must also provide data projector where not available in room)

Laptop-ready - a user-provided laptop may be connected to the in-room display system (projector or monitor) and to the network

SCOLA - receives programming from SCOLA, the non-profit organization that transmits international television programs for educational use via satellite

Other: live voice recording - class or presentation may be audiotaped from the lectern using in-room microphones
wall mounted video cameras - class or presentation may be videotaped from the lectern using in-room cameras
assisted listening - plug-in enhanced hearing device can be accommodated
