

Grant Opportunities & News You Can Use

Hello, faculty,

We are back with our May Grant Opportunities newsletter!

Before jumping in, I want to note that our newsletter might be looking different for a little bit, since I am going on parental leave at some point in the next few weeks. I am hoping to get one last issue out in mid-June but no promises. The newsletter will continue to run while I'm gone with opportunities and an updated calendar. Columns will likely be recycled and the History of American Philanthropy will be put on pause until I'm back.

Office hours will also continue to run as normal, though, for this month only, we need to move office hours to the second Friday in June so our office can help our colleagues in Development with Reunion. Our office hours this month will be **Friday, June 9th at 10 AM.**

You can find us here:

This month we have a [Featured Funder](#) column highlighting the Science, Technology, and Society Program at the NSF. This is one of the rare NSF programs available to humanists. For [Sage Advice](#), we have a column all about why you shouldn't treat grant money as fungible. For [The History of American Philanthropy](#), we are looking at Andrew Carnegie's "Gospel of Wealth."

We have [news stories](#) and brief thumbnails of opportunities coming due in July. And in the back, we have six months' worth of deadlines. (As always, check the website! Some of the later deadlines have not yet been released.) The final [internal grant deadline](#) for 2022-2023 was March 21st. We'll keep you posted when new ones come out next year.

That's it for us! Don't hesitate to reach out if you're in need of funding, someone to review your applications, help building a budget, advice on managing a grant, or just want to chat.

We're here to help!

NSF—Science, Technology, and Society

Over the years, we have shared plenty of opportunities from the National Science Foundation. During COVID, we focused on [RAPID Grants](#). [This time last year](#), we discussed the CAREER Award. We've discussed the new [Technology, Innovation, and Partnerships Directorate](#). And that's not mentioning all the articles we've written on policy changes within the agency.

But did you know that the NSF also has opportunities relevant to humanists? For those of you interested in the ethical, historical, or social scientific ramifications of STEM disciplines, the NSF offers funding through the [Science and Technology Studies Program](#). (We even had someone in our Philosophy Department get one this past year!)

“Science and Technology Studies (STS) is an interdisciplinary field that investigates the conceptual foundations, historical developments and social contexts of science, technology, engineering and mathematics (STEM), including medical science [...] STS research seeks to understand how scientific knowledge is produced and sanctioned, and how it is challenged and changes. It examines the theoretical foundations of science, brings to light underlying presuppositions and alternative interpretations, and assesses the reliability of research methods. It investigates how materials, devices and techniques are designed and developed; how and by whom they are diffused, used, adapted and rejected; how they are affected by social and cultural environments; and how they influence quality of life, culture and society. It also considers how socio-cultural values are embedded in science and technology, and how issues of governance and equity evolve with the development and use of scientific knowledge and technological artifacts. In addition, it explores relationships between STEM and fundamental social categories including race and gender, poverty and development, trust and credibility, participation and democracy, health and pathology, risk and uncertainty, globalization and environmental concerns.”

So if you do archival work on the history of science, study race and the medical system, are thinking about the ethics of AI, are rewriting the history of hysteria, or just want to write that biography of Leibniz and how he wanted to start a Crusade in Egypt, this could be a good opportunity.

As a word of warning, NSF applications tend to be more complicated than fellowship applications, with lots of moving parts, so reach out early if you're interested and we'll be happy to guide you through the application process, including helping you build a budget, calculate [summer salary](#) and [course releases](#), write a biosketch, and format everything correctly.

Deadlines: February 2nd and August 3rd Annually. **Funding:** Varies.

Sage Advice

Why Grant Money isn't Fungible

In 2020, Rice University was the subject of a headline that I am sure no one at the institution wanted to see: [“Rice University pays to resolve claims it defrauded federal grant program.”](#)

“From Nov. 18, 2006, through Sept. 30, 2018,” the article runs,

Rice knowingly engaged in a pattern and practice of improperly charging graduate students' stipends, tuition remission and related facilities and administrative charges to NSF awards. These charges were actually used in part for time the graduate students spent performing teaching duties unrelated to Rice's NSF research and development awards. The activities were not specifically incurred for the research awards, did not benefit those awards and otherwise were not allowable or allocable to the NSF awards, in violation of NSF award terms and conditions and the False Claims Act.

To settle the federal government's claims, Rice agreed to pay \$3,754,186, roughly twice the amount of money the government accused it of misusing.

It's an interesting story, in part because it is so banal. There's no alleged espionage in it, no stories of [hiding ties to foreign governments](#), no [\\$80,000 swimming pools](#). The money was spent on graduate students, doing real work, educating undergraduates in STEM courses. *It just wasn't the work that the university agreed to do when it accepted awards from the NSF.*

This brings me to the point of today's Sage Advice: **Grant money isn't like other pots of money. It isn't fungible.**

My household probably has six different checking and savings accounts because we're the sort of people who like having different accounts for different purposes. But if something unexpected comes up - a big tax bill, a new baby, our vet spooking us into spending several grand on completely unnecessary tests (hypothetically, I mean) - we can just transfer money from one pot to another and it doesn't matter because money is money.

Grants aren't like your household budget. When you receive grants, your award letter is a legal contract that binds you to only spending your funds on a specific pre-agreed scope of work. If you treat your grants as interchangeable pots of money, you could face legal consequences, including fines, audits, and even prohibitions on future applications. If the award is federal and Barnard signs off on your spending, the College could be on the hook for potentially millions of dollars of fines, same as Rice.

There's good news, though! We have someone whose job it is to help make sure that you are spending the money correctly. Victoria Toro, the Senior Associate Director, Post-Award Administration and Compliance Officer, who most of you already know, is located in the Provost's Office and works closely with both our team and Finance to make sure that grant spending is compliant with funder and federal regulations. If you find yourself in doubt, reach out to her.

Sometimes honest mistakes do happen. A student gets charged on the wrong grant, the wrong fringe rate is charged to a grant in Workday, whatever. Victoria can help with those situations, too. That's what she's there for. So don't hesitate to reach out, but be sure to thank her when you do. She has a tough job with high stakes and we're lucky to have her.

The History of American Philanthropy

“The man who dies thus rich dies disgraced.”

That’s the most famous line of Andrew Carnegie’s influential little tract, “The Gospel of Wealth.” And really, we could probably stop here, maybe with a brief nod to the contemporary heirs of Carnegie’s philosophy, like Warren Buffet, Bill Gates, and the other signatories of [“The Giving Pledge,”](#) who have publicly committed to giving away the majority of their fortunes. You could probably fill in the background to Carnegie’s philosophy—inherited wealth makes people lazy and entitled, and fortunes are only good if they lift up the rest of society—and you would have the gist of the argument right. But you would miss the much more interesting details of his argument and its reception by workers.

[The essay](#) starts out with a story Carnegie tells about visiting members of the Sioux Nation, though he doesn’t say when, where, or why. Right from the start, he frames the people he visits as remnants of another time. “In former days there was little difference between the dwelling, dress, food, and environment of the chief and those of his retainers. The Indians are today where civilized man then was. When visiting the Sioux, I was led to the wigwam of the chief. It was just like the others in external appearance, and even within the difference was trifling between it and those of the poorest of his braves.”

While you might be inclined to think that it’s a pity that we ever moved away from such an equal society, Carnegie assures you that it’s far better for humanity to adopt “this great irregularity than universal squalor.” But, as his reasoning goes, even if you don’t agree with the “rising tide lifts all boats” philosophy behind that sentiment, it doesn’t matter. Great wealth and great inequality are here to stay.

The alternatives to capitalism, individualism, and “survival of the fittest” are hardly practical, Carnegie thinks. Socialism might be a higher moral ideal, but it would require breeding a new type of human, selflessly interested in the good of all above the good of the individual.

However idealistic, socialists are at least trying to benefit society, Carnegie thinks. He saves his real disdain for rich men who leave their families fortunes. To him, it’s obvious that inheriting a great fortune saps men (always men - women should be provided with modest bequests) of the will to do anything productive with their lives. “I would as soon leave to my son a curse as the almighty dollar,” he remarks in one of his characteristically snappy lines. Millionaires who give away their fortunes after death are hardly any better. Waiting until death to give money away to charity leaves the unpleasant impression that the rich man would have taken his money with him if he could.

The best of all was to gather a great fortune and give it away to causes that helped the poor help themselves. That’s what Carnegie did. He left his wife a modest fortune and their townhouse in New York that she eventually had to sell because the upkeep was too expensive. He left his daughter a similarly modest fortune. [His heirs also inherited property on a Georgia](#) island that they have been gradually donating or selling to the state.

He left the rest of his fortune to libraries, schools, and non-profits. Next time, I want to talk about how his workers received his philanthropic gifts.

“None of this would be out of the ordinary—except that, in 2020, prior to any of these moves, FSU had completed a far-reaching investigation prompted when Gilbert emailed a description of his erotic dream to a graduate student. The probe revealed a yearslong history and concluded that Gilbert’s “gendered, sexualized and invasive behaviors were severe and pervasive.” NIH learned the full nature and extent of his misconduct at FSU before making the new award but after his move to San Diego—where his behavior elicited a new probe, Science has learned, and drove at least one woman scientist from the institute.” [<<more>>](#)

William T Grant Foundation

William T Grant Scholars Program

Deadline: July 6, 2023

“The William T. Grant Scholars Program supports career development for promising early-career researchers. The program funds five-year research and mentoring plans that significantly expand researchers’ expertise in new disciplines, methods, and content areas. Applicants should have a track record of conducting high-quality research and an interest in pursuing a significant shift in their trajectories as researchers. We recognize that early-career researchers are rarely given incentives or support to take measured risks in their work, so this award includes a mentoring component, as well as a supportive academic community. Awards are based on applicants’ potential to become influential researchers, as well as their plans to expand their expertise in new and significant ways. The application should make a cohesive argument for how the applicant will expand his or her expertise. The research plan should evolve in conjunction with the development of new expertise, and the mentoring plan should describe how the proposed mentors will support applicants in acquiring that expertise. Proposed research plans must address questions that are relevant to policy and practice in the Foundation’s focus areas.”
